

Final Workspace Checklist

AWS, DevOps, VS Code, monitoring and deployment readiness

Flipkart Clone Microservices Workspace

Final Workspace Checklist

This file confirms what is included in the final Flipkart Clone workspace before download.

Application Code

- [x] api-gateway
- [x] user-service
- [x] product-service
- [x] cart-service
- [x] order-service
- [x] payment-service
- [x] notification-service
- [x] frontend

Local Run Support

- [x] docker-compose.yml
- [x] .env.example
- [x] HOW_TO_RUN.md
- [x] Product seed script: product-service/scripts/seed.js
- [x] Health endpoints for services
- [x] Smoke test script: scripts/smoke-test.sh

AWS Deployment Support

- [x] AWS console full guide PDF: docs/AWS_CONSOLE_ONLY_SETUP_GUIDE.pdf
- [x] AWS quickstart: AWS_DEPLOYMENT_QUICKSTART.md
- [x] AWS quickstart PDF: docs/AWS_DEPLOYMENT_QUICKSTART.pdf
- [x] Terraform starter: infrastructure/terraform
- [x] ECR repository creation script: scripts/aws-create-ecr-repositories.sh
- [x] ECR build/push script: push-to-ecr.sh
- [x] Env-file ECR build/push script: scripts/aws-ecr-build-push-template.sh
- [x] ECS force deploy script: scripts/aws-ecs-force-deploy-template.sh

DevOps Pipeline Support

- [x] GitHub Actions CI syntax check: .github/workflows/ci.yml
- [x] GitHub Actions manual all/selected deploy workflow: .github/workflows/deploy-to-aws-ecs.yml
- [x] GitHub Actions automatic per-service workflows: .github/workflows/deploy-*.yml
- [x] Optional per-service GitHub workflow generator: scripts/create-github-workflows.sh
- [x] CodeBuild buildspec for API Gateway

- [x] CodeBuild buildspec for User Service
- [x] CodeBuild buildspec for Product Service
- [x] CodeBuild buildspec for Cart Service
- [x] CodeBuild buildspec for Order Service
- [x] CodeBuild buildspec for Payment Service
- [x] CodeBuild buildspec for Notification Service
- [x] CodeBuild buildspec for Frontend
- [x] ECS task definition templates: `devops/ecs-task-definitions`
- [x] DevOps pipeline guide: `docs/DEVOPS_PIPELINE_SETUP.pdf`
- [x] Final Phase 1 validation + Phase 2 CI/CD guide: `docs/PHASE_1_INFRA_VALIDATION_PHASE_2_CICD.pdf`
- [x] AWS deployment validation helper: `scripts/aws-validate-deployment-template.sh`
- [x] Optional per-service GitHub workflow generator: `scripts/create-github-workflows.sh`

VS Code Support

- [x] Recommended extensions: `.vscode/extensions.json`
- [x] VS Code tasks: `.vscode/tasks.json`
- [x] VS Code startup guide: `docs/START_AFTER_CODE_IN_VSCODE.pdf`
- [x] VS Code AWS linking guide: `docs/VSCODE_AWS_INFRA_AND_BUILD_GUIDE.pdf`

Monitoring Support

- [x] Monitoring guide: `docs/MONITORING_AND_OPERATIONS_GUIDE.pdf`
- [x] CloudWatch dashboard instructions
- [x] CloudWatch alarm instructions
- [x] ECS/ALB/DocumentDB monitoring instructions
- [x] Incident runbooks
- [x] Cost monitoring checklist

References

- [x] Official references document: `docs/REFERENCES.pdf`
- [x] Combined developer/operations/reference PDF:
`docs/DEVELOPER_OPERATIONS_MONITORING_REFERENCES.pdf`

AWS Production Details Cross-Checked

- [x] API public route is `/api/products`, not `/api/products/products`.
- [x] ALB rule should send `/api/*` to API Gateway target group.
- [x] Frontend should use `REACT_APP_API_URL=/api` for ALB routing.
- [x] Backend AWS Dockerfiles include Amazon DocumentDB TLS CA bundle.
- [x] DocumentDB URI examples include `tls=true`, `tlsCAFile=/app/global-bundle.pem`, and `retryWrites=false`.

- [x] Cloud Map service names use `*.flipkart.local`.
- [x] Security group guidance includes service-to-service communication.
- [x] GitHub Actions workflow uses `Dockerfile.aws` when available.
- [x] CodeBuild builds use `Dockerfile.aws` when available.

Validation Performed in Workspace

- [x] Backend JavaScript syntax check passed.
- [x] Frontend production build previously passed.
- [x] Shell scripts syntax checked.

Note: Docker Compose full stack was not run inside this sandbox because Docker is not installed here, but the project is configured for Docker Compose and has been statically validated.
